

# MES COLLEGE ERUMELY

PO, PSO, CO

M. Sc Electronics

## MES COLLEGE ERUMELY

#### **DEPARTMENT OF ELECTRONICS**

#### POSTGRADUATE PROGRAMME

### M.Sc Electronics programme

M.Sc Electronics is a 2-years postgraduate program in the stream of Electronics. The course is designed to help students build in problem solving abilities, expertise in designing and operation of electronic systems.

#### **A.** Programme Outcomes

PO1	Impart the basic and up-to-date knowledge in electronics with					
	sufficient practical sessions					
PO2	To be specific, subject areas like digital signal processing, embedded					
	Electronics, Control system, digital Design, artificial Intelligence, deep					
	Learning, Optical Communication techniques etc are discussed with					
	adequate knowledge which will help to develop the system					
PO3	To have practical knowledge in these subjects					

### **B.** Programme Specific Outcomes

PSO1	Prepare students to pursue research in Electromagnetics, signal
	Processing,Image Processing,artificial Intelligence and
	ANN,Robotics.
PSO2	To develop an ability to apply knowledge in design and
	development of various Electronic/Electrical System.
PSO3	To become an entrepreneur in embedded based systems,
	digital and analog system design
PSO4	To provide in depth concept of IC technology and VLSI
	design together with Hardware Descriptor Language and
	Nanoelectronics.
PSO5	To develop multi-skilled engineers who are able to spearhead
	the progress of the nation in the information age.

## C. Course Outcomes

Semester I			
Course	Course	Course Outcome	
code	Title	CO1	
EL010101	Network Analysis and Synthesis	CO1	To develop knowledge of basic circuital law
			and simplify the network using reduction
		CO2	techniques
		CO2	Analyze the circuit using Kirchhoff's law
		CO2	and Network theorems
		CO3	To get thorough Knowledge of basic circuit
			laws, Laplace and fourier transforms and its
		GO 4	applications
		CO4	Infer and evaluate transient response, Steady
			state response, network functions using
		005	transformation techniques.
		CO5	To understand general properties of signals
		00.6	and systems
		CO6	To analyse and synthesis passive networks
EL010102	Electronic Circuits Analysis	CO1	Review of basic concepts of semiconductor
	Allalysis		physics and devices.
		CO2	Analyze the characteristics of various
			electronic devices like diode, transistor etc.,
			and able to classify and analyze the various
			circuit configurations of Transistor and
			MOSFETs.
		CO3	To study the characteristics and analysis of
			active electronic devices
		CO4	To familiarize the operational amplifiers and
			its applications
		CO5	To know the design of various applications of
			analog IC's
		CO6	To understand the various power electronic
			devices and its applications
EL010103	IC Fabrication and	CO1	To study the IC fabrication techniques
	MEMS	CO2	To familiarize the MEMS technology,
			fabrication and applications
EL010104	Digital Communication Techniques	CO1	To understand information theory and coding
		CO2	Knowledge of statistical theory of
	20011114000		communication and explain the conventional

		~~-	digital communication system.
		CO3	Apply the knowledge of signals and system
			and evaluate the performance of digital
			communication system in the presence of
			noise.
		CO4	To familiarize various coding techniques and
			methods
		CO5	To understand convolutional codes and
			cryptography
		CO6	To get the knowledge on digital modulation
			techniques and their comparison
EL010105	Advanced	CO1	To familiarize the design and troubleshooting
	Electronics Circuit		the digital circuits, analog circuits, and IC
	Lab		based circuits
		CO2	To get in-depth knowledge on opamp circuits
			and their applications
	-	CO3	To familiarize the power electronics based
			devices and their applications
	-	CO4	To design and set up various modulation
			based circuits
		•	Semester II
			beinester 11
EL010201	Digital Signal	CO1	Interpret, represent and process
	Processing & Applications		discrete/digital signal and system.
		CO2	Thorough understanding of frequency
			domain analysis of discrete time signals using
			various transformation techniques.
		CO3	To get thorough knowledge on FFT and its
			applications
		CO4	Implementation issues such as computational
	1		complexity, hardware resource limitations as
		l l	1
			well as cost of DSP systems or DSP
			* •
		CO5	well as cost of DSP systems or DSP
		CO5	well as cost of DSP systems or DSP Processors.
		CO5	well as cost of DSP systems or DSP Processors.  To familiarize digital IIR and FIR filter
EL010202	AVR based		well as cost of DSP systems or DSP Processors.  To familiarize digital IIR and FIR filter designing and its realization To discuss the various applications of DSP
EL010202	AVR based Embedded Systems	CO6	well as cost of DSP systems or DSP Processors.  To familiarize digital IIR and FIR filter designing and its realization
EL010202		CO6	well as cost of DSP systems or DSP Processors.  To familiarize digital IIR and FIR filter designing and its realization  To discuss the various applications of DSP  To give an in-depth knowledge on AVR microcontroller
EL010202		CO6 CO1	well as cost of DSP systems or DSP Processors.  To familiarize digital IIR and FIR filter designing and its realization To discuss the various applications of DSP To give an in-depth knowledge on AVR

		applications
Mobile Computing	CO1	To introduce mobile computing technology
	CO2	To know the various emerging technologies
		in mobile communications
	CO3	To familiarize the various mobile
		communication standards and applications
VLSI Design and	CO1	To get thorough knowledge on MOS
Analysis		technology
	CO2	Understand the steps of IC fabrication,
		Crystal Growth and Wafer Preparation.
	CO3	Study the Epitaxy, Diffusion, Oxidation,
		Lithography, Etching and metallization.
	CO4	
	CO4	To familiarize the basic IC fabrication
		process
	CO5	Describe the techniques used the design of
		Describe the techniques used the design of CMOS logic circuits, switches and memory
		in VLSI.
		ii vasi.
	CO6	To discuss the various MOS circuit design
		process and FPGA
Microcontrollers	CO1	To familiarize the AVR microcontroller
and DSP Lab		programming methods
	CO2	To study how to interface AVR with various
		peripherals and controlling devices
	CO3	To familiarize MATLAB programming and
		its applications in DSP
Digital System		emester III
-	COI	To get an in depth knowledge on digital
		systems
	CO2	To design digital circuits
		10 design digital elicuits
	CO3	To get a knowledge on Finite State Machines
	CO4	To introduce VHDL and to familiarize the
		design of digital circuits using VHDL
	VLSI Design and Analysis	CO2 CO3  VLSI Design and Analysis  CO2 CO3  CO4  CO4  CO5  CO6  Microcontrollers and DSP Lab  CO2 CO3  CO2 CO3

EL010302	Control Systems	CO1	To understand the basic knowledge on
			control system and its classification
		CO2	To understand the basic knowledge on
			control system and its classification
		CO3	To study in detail the need for blockdiagram
			and signal flow graph representation
		CO4	To have an idea about the concept of stability
			and various techniques for stability analysis
		CO5	To understand the various plots used for
			analyzing control systems
		CO6	To introduce the concept of state space
			modeling of systems
		CO7	To discuss the various real time applications
			of control system including PLC and SCADA
EL010303	Object Oriented	CO1	To acquire knowledge on Object Oriented
	Programming		Programming
		CO2	To introduce Python programming concepts
			in python
		CO3	To understand the Raspberry pi single board
			computer and its programming using Python
EL810301	Robotics	CO1	To get an introduction about Robots and
			robotics
		CO2	To understand the kinematics and dynamics
			of Industrial robotic arms and mobile robots
		CO3	To get an introduction about various types
			sensors and actuators for robotics
		CO4	To understand the design of robot controllers
		001	and programming of robotic systems
EL010304	Object Oriented Programming Lab	CO1	To acquire programming skills on Object
		G02	oriented programming concepts in python
		CO2	To get a practical knowledge on interfacing
			Raspberry Pi with python
	•	S	emester IV
EL010401	ARM Processor	CO1	To equip the students to use ARM processor
	Based Embedded	CO2	To get a thorough knowledge of using ARM
	System		processor with embedded c programming for
			application development
		CO3	To understand how practically apply gained

			theoretical knowledge in order to design, analyze and implement embedded systems
EL810403	Optical Sensor Technology	CO1	To get a basic understanding of fundamental principles of Optical Fiber Technology,
			different multiplexing techniques
		CO2	Analyze various premises, approaches
			procedures and results related to
			optoelectronic systems.
		CO3	To familiarize the different testing equipment
			for fiber optic communication
		CO4	To understand fiber optic network basics
		CO5	Study of components, devices and equipment
			of optoelectronic systems.
		CO6	Formation of Optical Fiber Communication
			System.
EL810402	Bio-medical Electronics	CO1	To understand the basics of instrumentation
			and various biomedical sensors
		CO2	To understand the measurement of
			physiological quantities
		CO3	To familiarize the various instrumentation
			related to biomedical equipment.
